# As an introduction

2

## Only one exercise this week

 Objective... play with

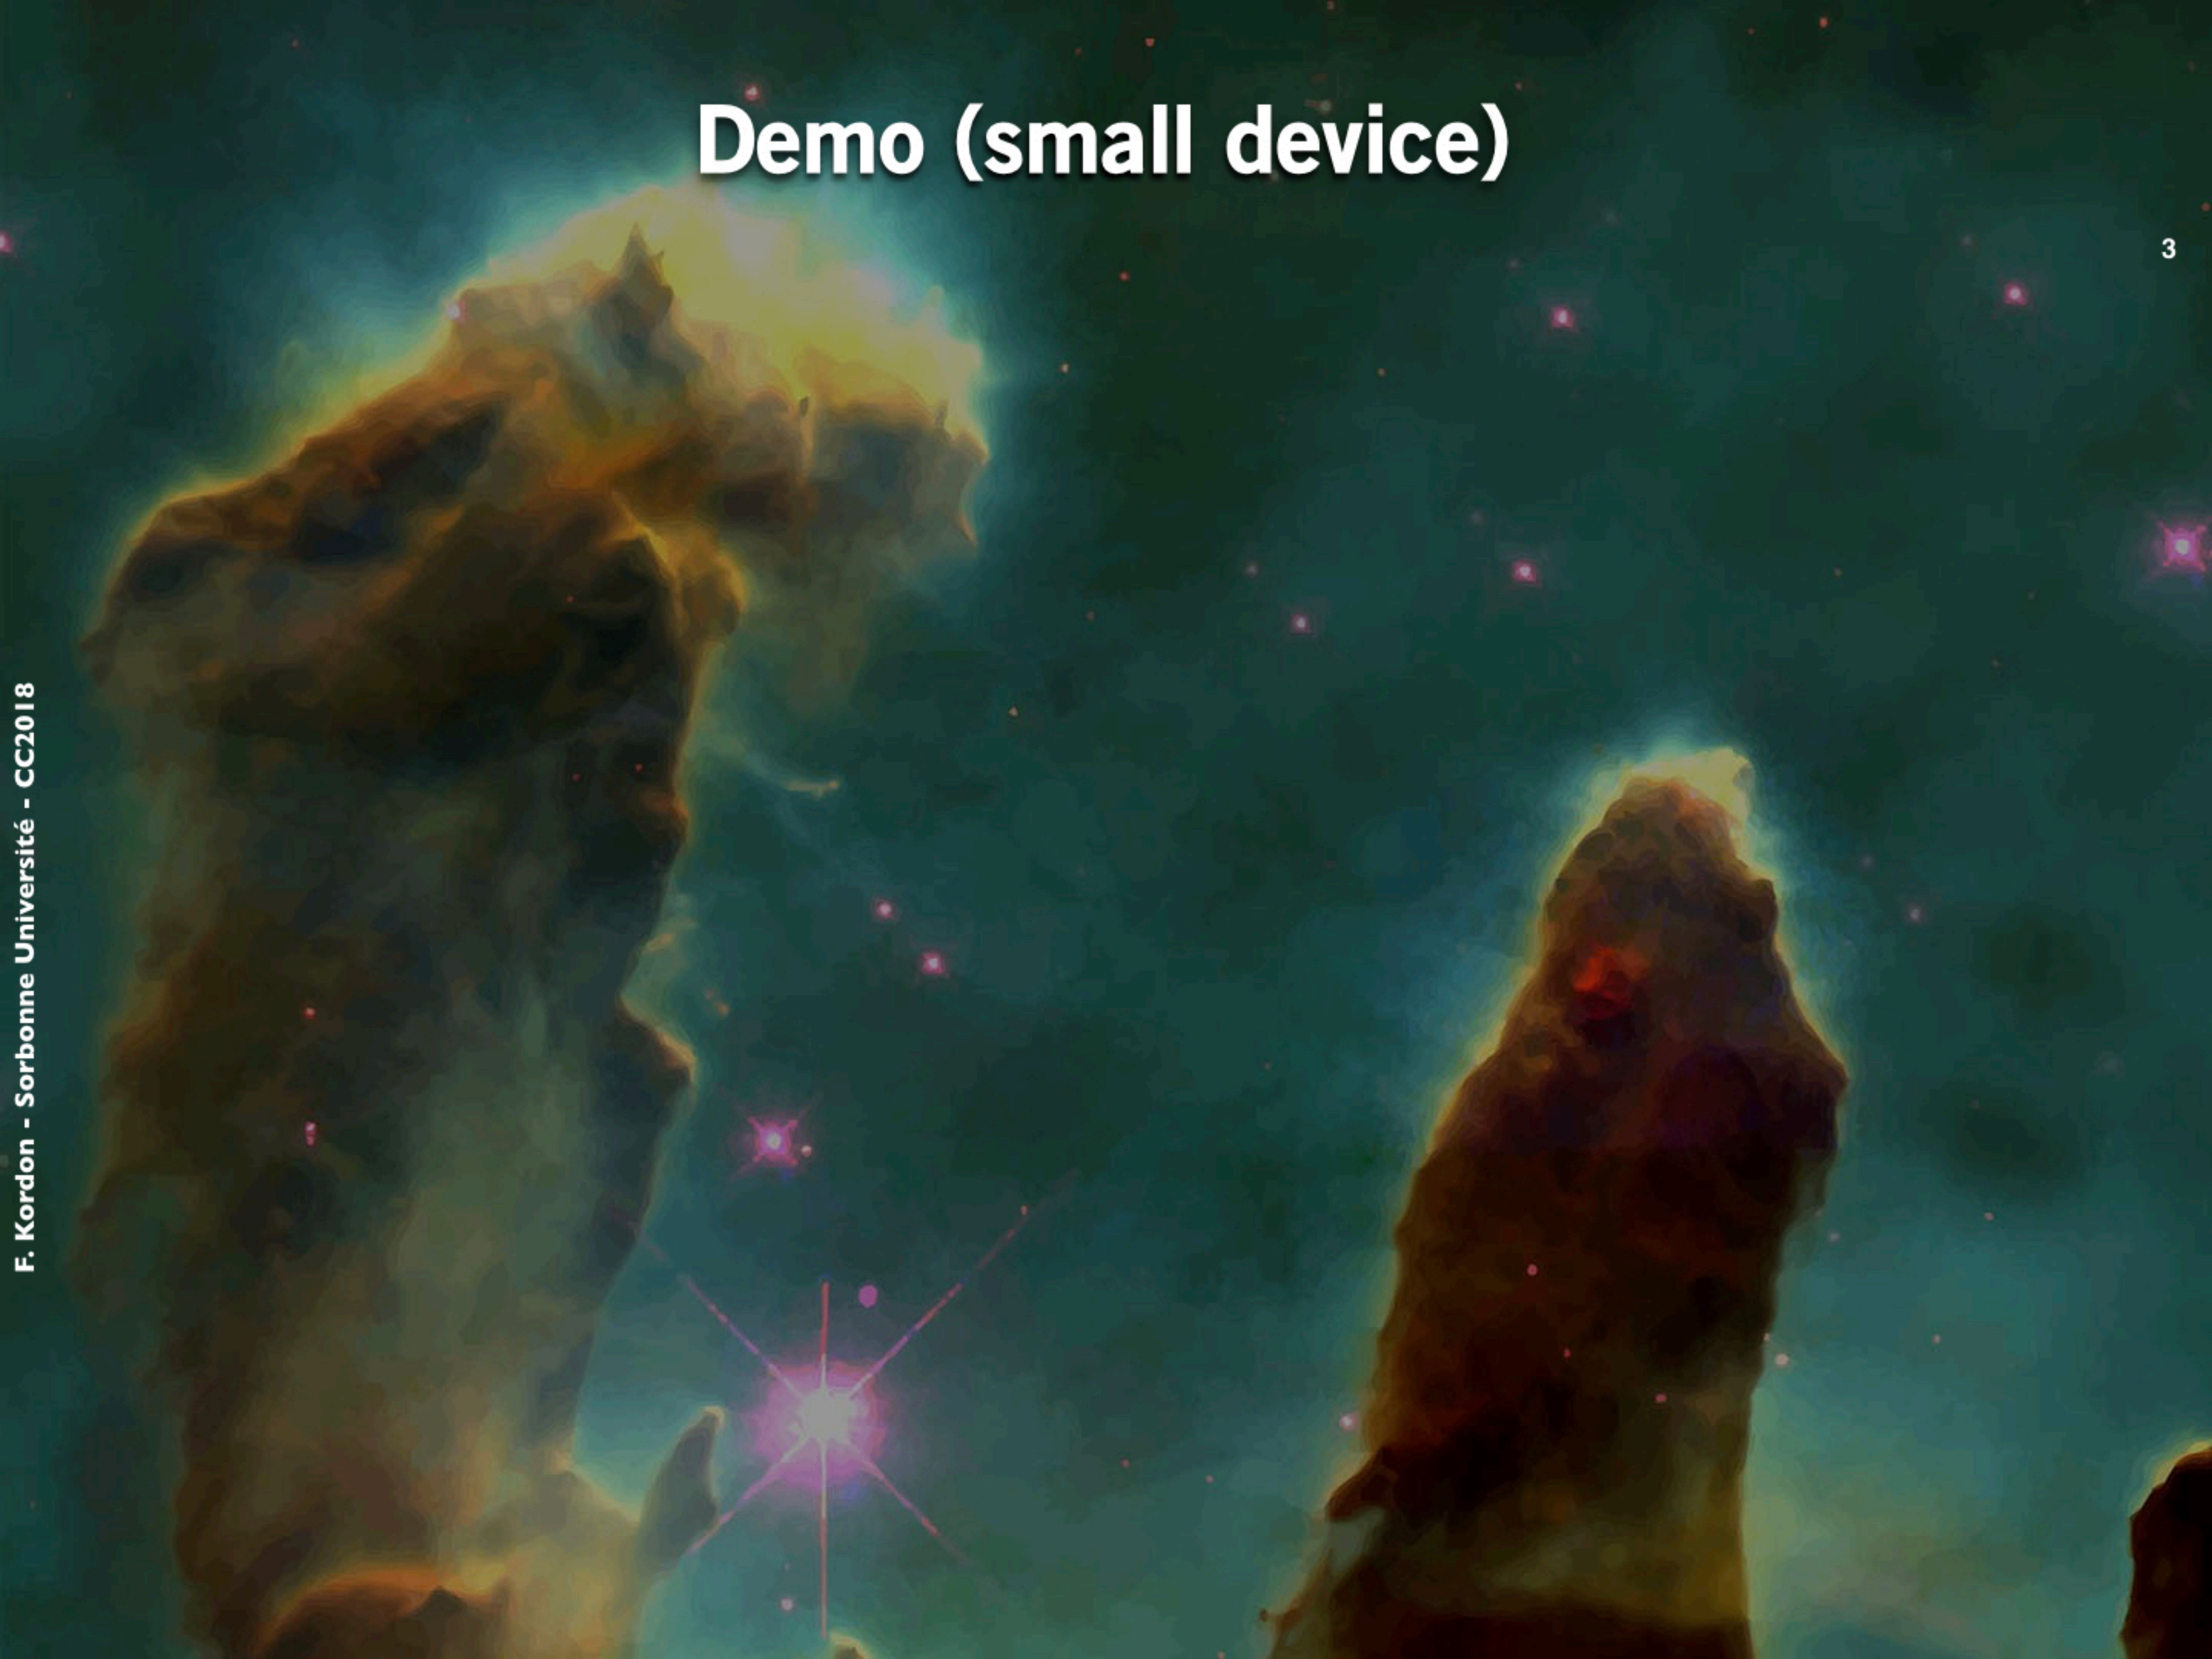

- ▶ UINavigationController
- ▶ UINavigationController
- ▶ UISplitViewController
- ▶ A bit of camera (just for fun 😄 )
- ▶ Sorry, difficult to put UITabBarController too

## Old exercise

-  Dramatically enriched during the MOOCs
  - ▶ This version is inspired by the one of Vincent Deyres
-  Similar Apps on the AppStore

# Demo (small device)

# Demo (large device)

# Be aware of

## Interactions between views

- Small device
  - ▶ The tableView is updated when the detail view disappears
- Large device
  - ▶ The tableView is updated simultaneously
  - ▶ Request an access to the master view

## In the AppDelegate

- Root controller differentiated from small to large device
  - ▶ Small device, a UITableViewController
  - ▶ Large device, a UISplitViewController
- Here, behaviour of a UISplitView in a small device is inappropriate

## Question

- Do you want to popover in a large device?

# As a conclusion...

**Have fun!**

**You should know how to proceed**

- Remember, task management Apps are successful
  - ▶ Here you miss persistency

**You may enrich this exercice**
