

«MyMood»

Fabrice.Kordon@lip6.fr

Goal of the exercise

Manipulate Bonjour

- Detect devices located on a same LAN
- Service `_mood._tcp.`
- Port 9090

Manipulate preferences a bit

- Set the default exported name in the device's settings
- Otherwise, use the device name

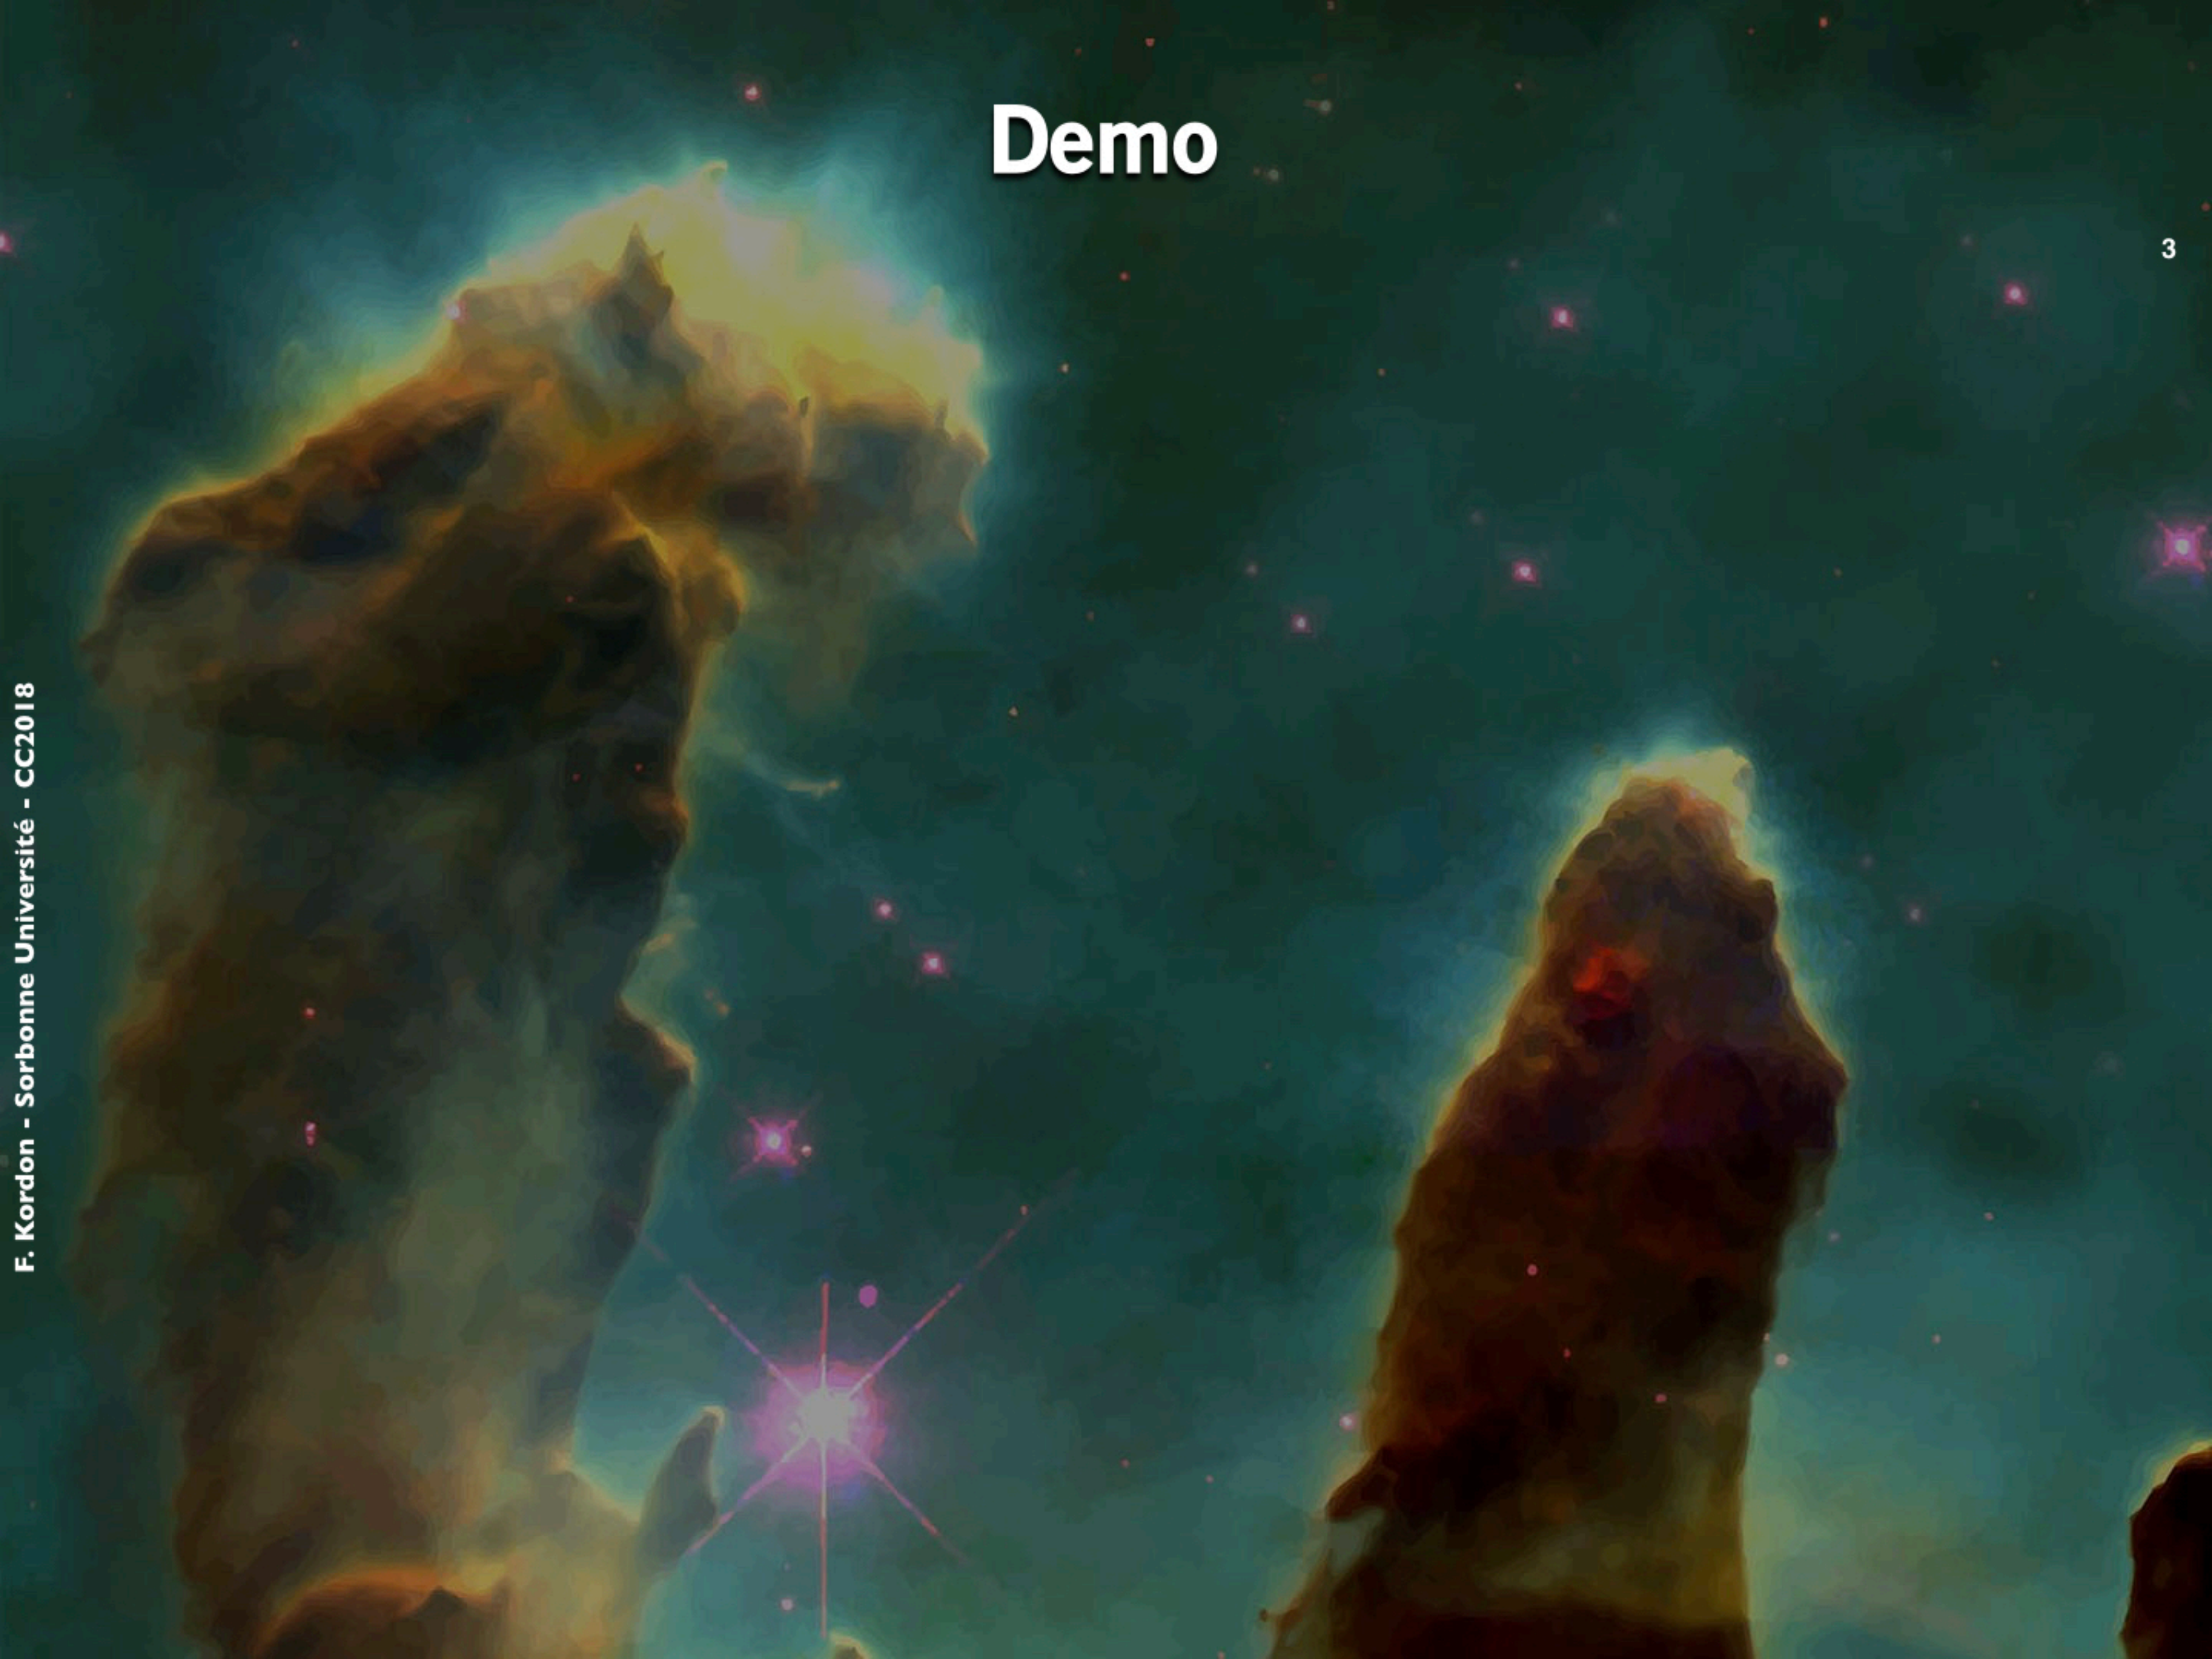

Play once more with UITableViewController

- This is good for your health 

Play once more with UINavigationController

- Good for health too 

Demo

Be aware of

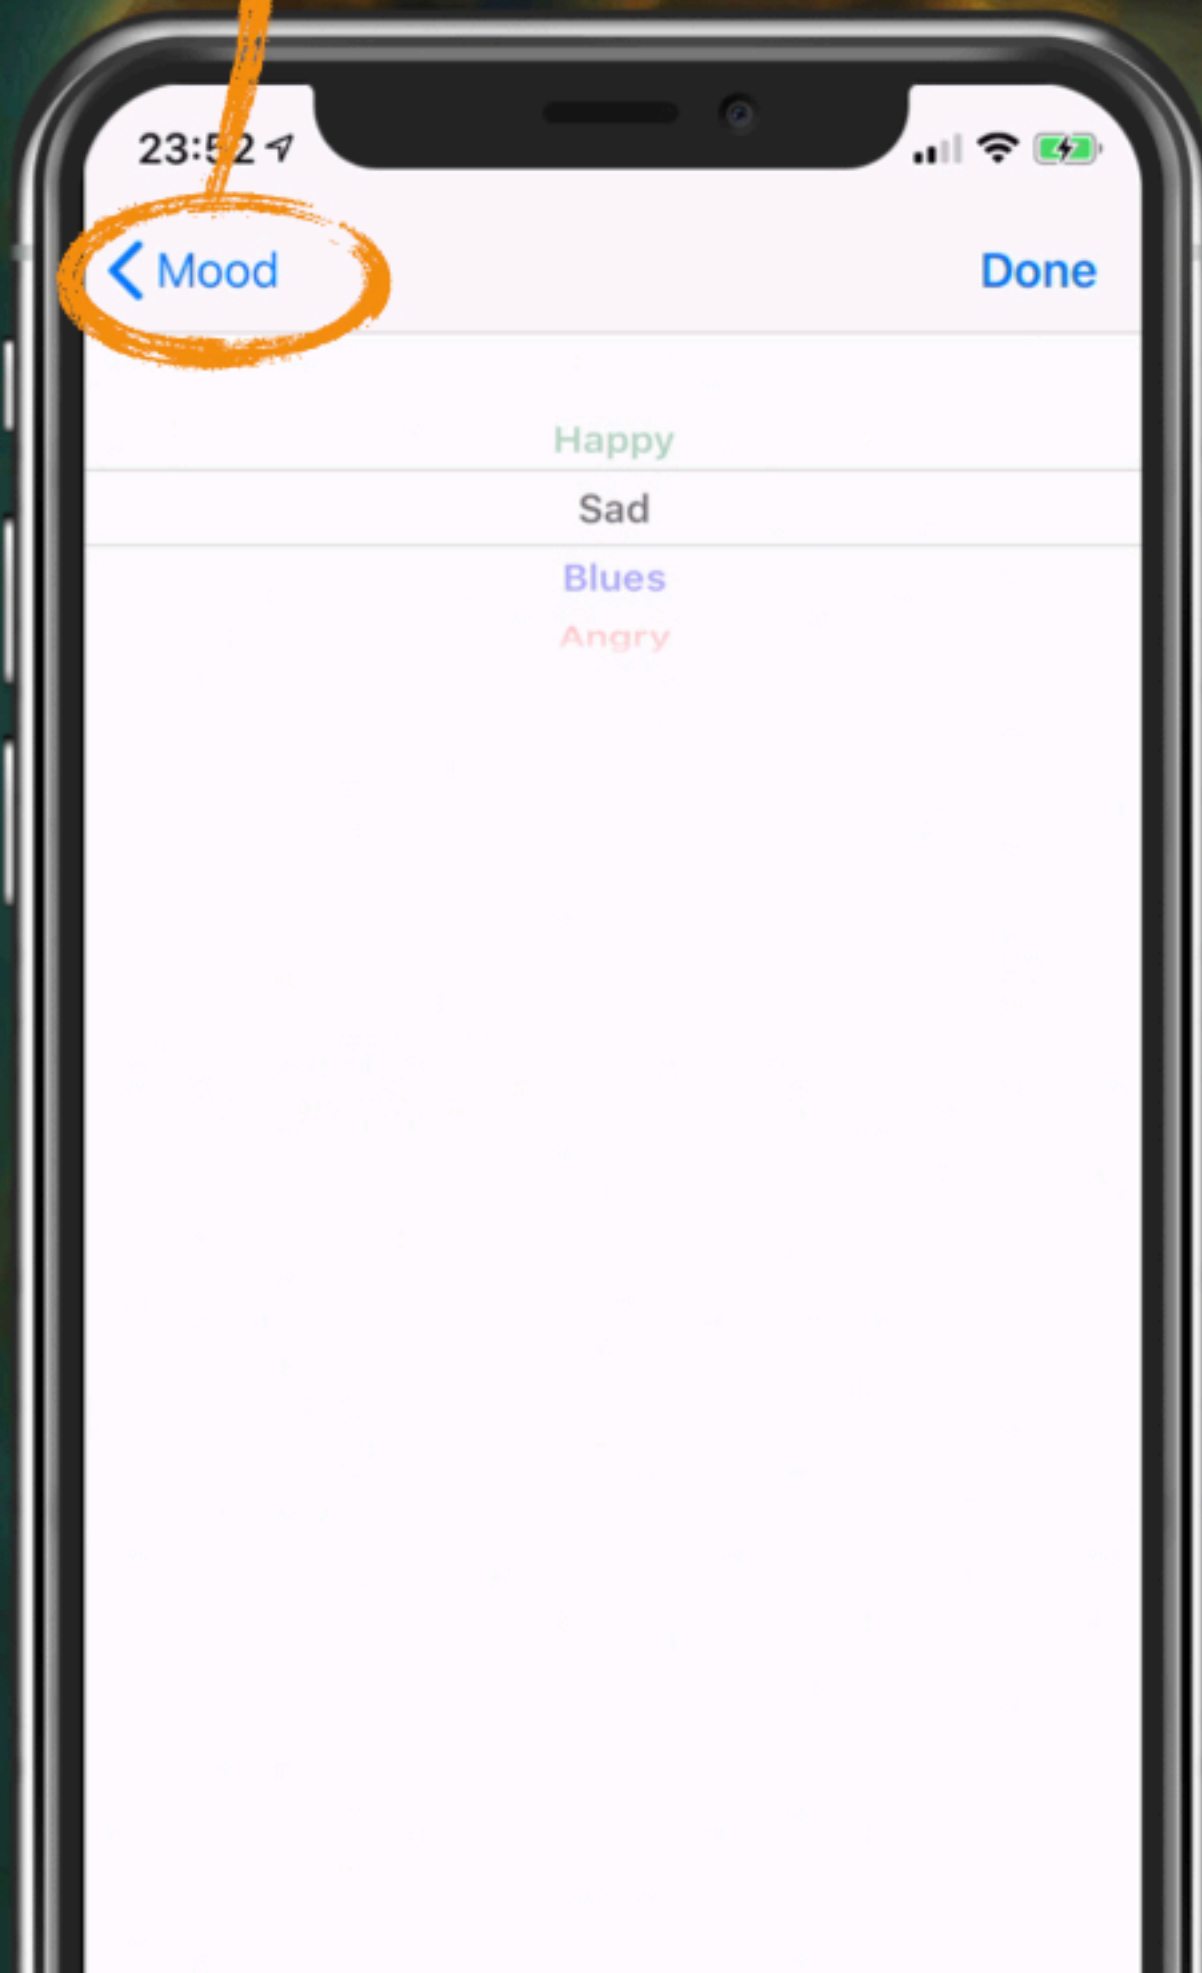

Automatic

Explicit «pop» in the navigation

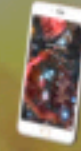

Depends on the pressed button

Be aware of

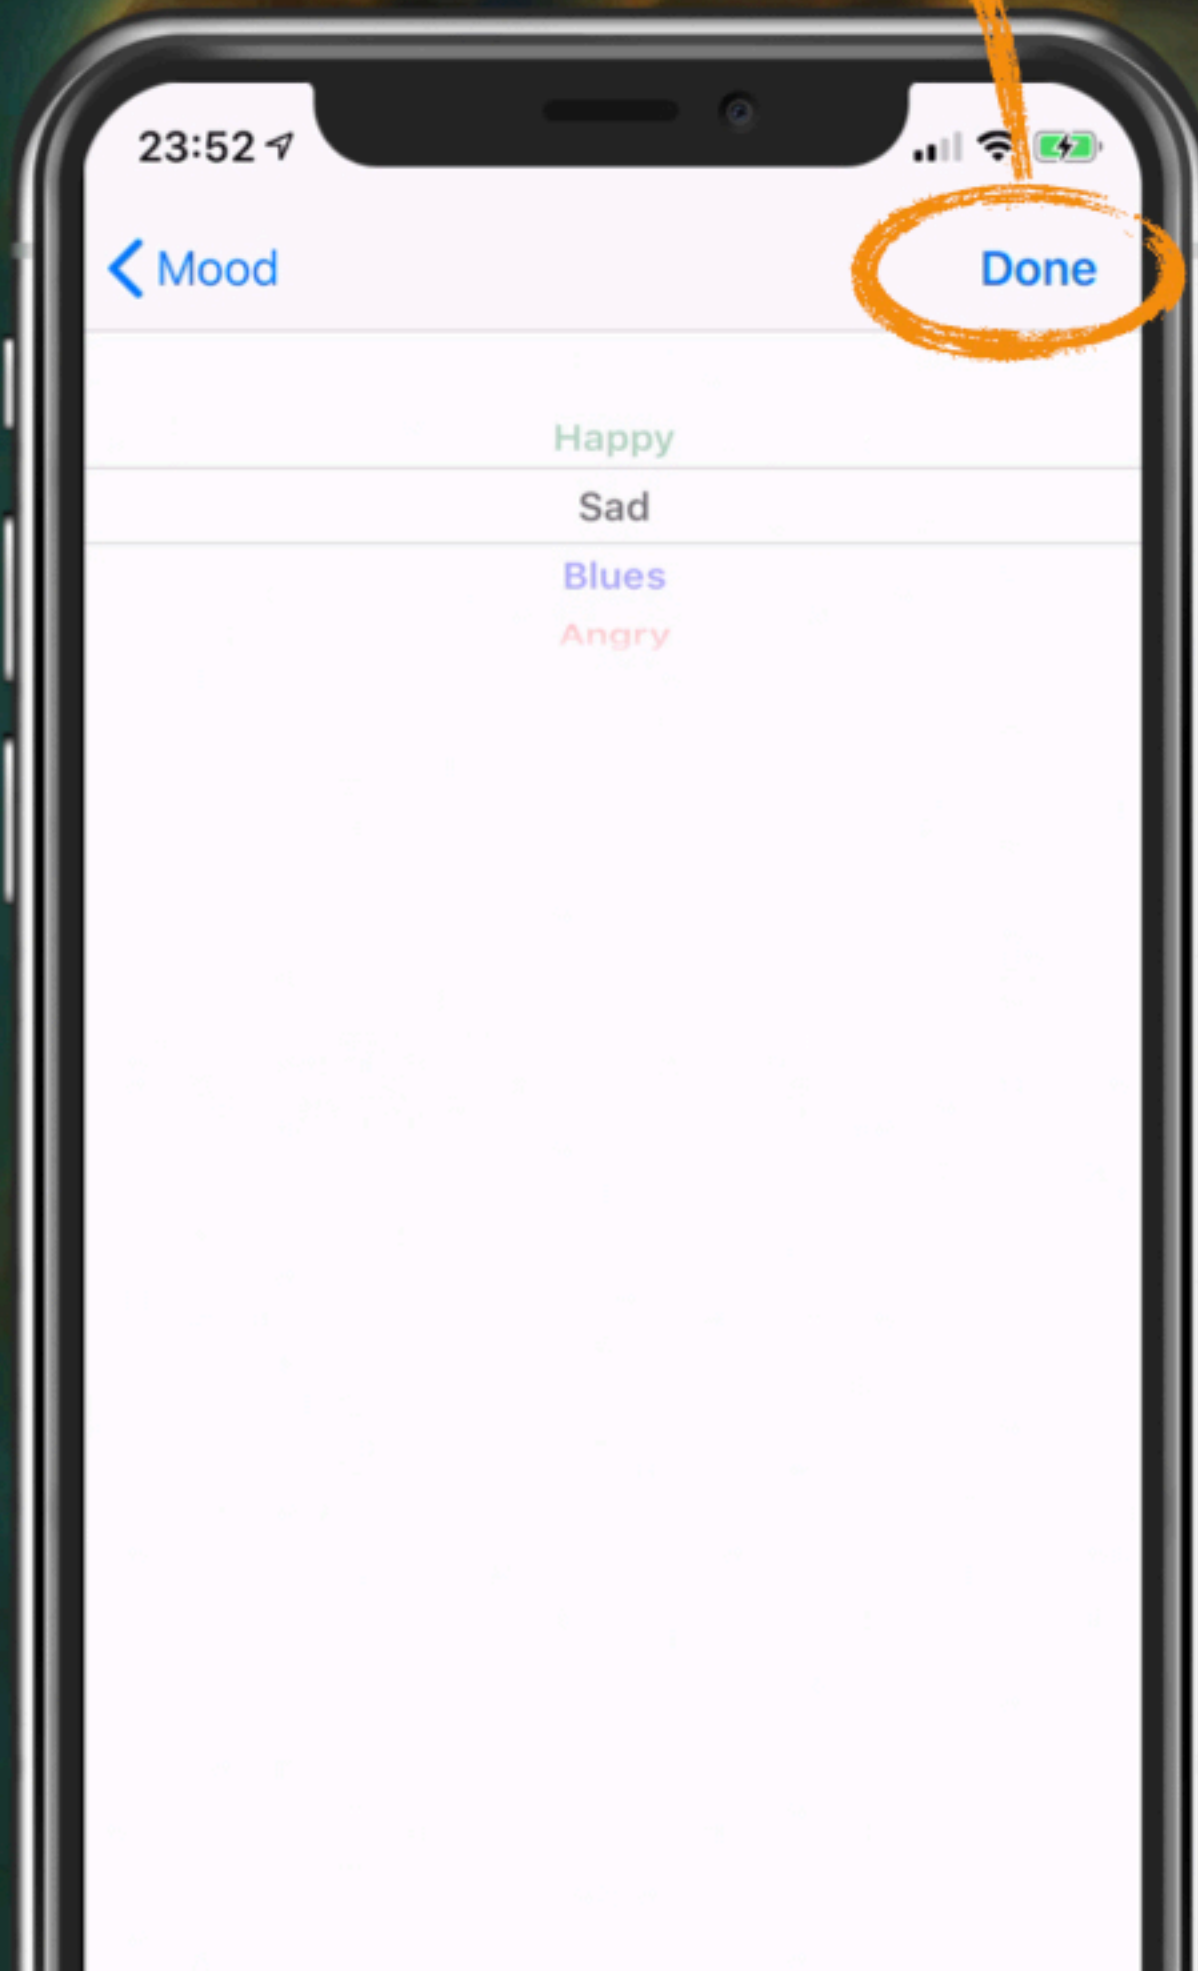

Explicit

Explicit «pop» in the navigation

Depends on the pressed button

Be aware of

4

Explicit «pop» in the navigation

- Depends on the pressed button

How, to do it?

- Remember the methods

 - ▶ `pushViewController(_:animated:)`

 - ▶ `popViewController(animated:)`

- Request to the navigation controller

 - ▶ By means of the view controller «self»

As a conclusion...

Have fun!!!

- 👤 And show your mood

As usual

- 👤 You may enrich the exercise
- 👤 You may use ressources on the video companion web page
